# Reprocessing

## Cleaning & sterilising your dental instruments

A Manufacturer's Recommendation

Effective reprocessing of reusable medical devices (RMDs) is crucial in providing the dental practitioner the ability to provide quality dental care for their patients. The dental practitioner is responsible to ensure the RMDs to be used have been reprocessed through a validated cleaning and sterilisation protocol.

### This presentation provides;

- Guidance on your obligation under the National Law
- An understanding to identify a critical instrument (and what isn't...)
- An understanding on the cleaning process, and how to validate
- An understanding of the steam sterilisation process, and the daily / weekly / annual testing requirements
- An understanding of batch control identification, and how to implement
- An understanding of the validation protocols for reprocessing RMDs
- The location of available tools to benchmark your current process
- An evidence-based understanding of reprocessing in line with AS4815:2006, ADA IC Guidelines (3rd Ed.)

Presented by **Christopher Jobson**

W&H Business Relationship Manager, Australia/New Zealand

**Christopher Jobson has worked exclusively within the Australian Dental Industry for thirty years, in consumable and equipment sales and for the past ten years with dental handpiece and sterilizer manufacturer, W&H.**

W&H's experience in decontamination and sterilisation of complex RMDs is well-known, as is their ongoing commitment to infection control education to Dental Professionals and Industry Members.

Chris has gathered practical knowledge and experience through his activities and contacts with dental professionals, hygiene experts and activities with the HE-023 committee for Australian Standards in the field of infection control, supported by his technical knowledge as a manufacturer of dental handpieces and benchtop steam sterilizers.
